

VE1260

Eco Drop Bolt

The patented VE1260 is a high torque motor driven drop bolt with up to 35kg pre-load/side load tolerance. It can be installed vertically in the door frame (lock style) or horizontally in the frame header and has a symmetric dead-bolt mechanism allowing it to be used on 180° degree swing through doors.

The VE1260 consumes an inrush current of 290mA@12VDC only during locking and unlocking action (Active Mode), then in the locked or unlocked state (Sleep Mode), the drop bolt consumes current less than 15mA@12VDC.

A series of additional Strike Plates allow for door misalignment of up to $\pm 12\text{mm}$ and a retrofit version of the FSH Eco Lock is available to suit the PADDE/TRIMEC ES8000 drop bolt footprint.

We recommend to operate the product in 3-Wire-Mode (see installation manual). An optional LED red/green indicator unit is available.
