

Sabre DL710 Digital Smart Lock - Black

SKU SAB-DL710-BLK

MPNSAB-DL710-BLK

DESCRIPTION

The Sabre DL710 offers a simple yet modern design lever set with all the modern convenience smart locks offer. The convenience is not just limited to all the smart features. Often installation poses the biggest obstacle when upgrading to a smart lock. The DL710 easily retrofits with the most common holes size (54mm cross bore) used to install most mechanical locking in the home or office. So, it becomes easier to shift to a smart locking solution by using the DL710. The DL710 operates on just 4 x AAA Alkaline batteries. Connect to your new smart lock to your mobile device and explore more features or the add the DLG2 Wi-Fi bridge to give you even more control even when you're not at home.

Fingerprint (Biometrics)

This is one of the best functions of this smart lock. It has easy and super quick recognition and user set up. (Controlled via APP)

Smart Card

In addition to the fingerprint technology your DL is supplied with smart cards that can be used in the same way as your fingerprint. You simply set the card up and tap away. (Controlled via APP)

App Lock and Unlocking

You can use the app via Bluetooth to lock and unlock the door. With an addition of a Wi-Fi bridge, you can lock and unlock remotely.

Concealed Code

This feature allows you to add digits to the front of your code to make it difficult for someone to remember your code if they were standing behind you. Your code can appear in sequence when the code is entered and the door will still unlock.

Auto Locking

This feature controls how long it takes before the lock re-locks. This can allow the user to take their time so they can gain entry through the door. (Controlled via APP)

Passage Mode

Allows the door to remain unlocked for periods that the user determines. It could be set for a certain time or day of the week when you require the door to be unlocked for convenience. (Controlled via App)

Emergency Power

This is handy for those times we forget to replace the batteries in a timely manner. Using a micro-USB power bank simply plug in and use this power to give you entry. Remember to replace your batteries as quickly as possible to avoid the need to do this again.

Mechanical Key

As much as we rely on the DL technology there is still the capability to gain entry via a mechanical key. This is normally a last resort. It's advised that this key be stored in a secure and easy to access location just in case.
